SRIKANT AJITH

JAVA BACKEND DEVELOPER | MICROSERVICES & DISTRIBUTED SYSTEMS

Bangalore, India | 7869967670 | srikantajith16@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Java Backend Developer with 4+ years of experience building payment and wallet microservices at Comviva. Delivered integrations for 3 major banks in approximately 4 months, implemented payment and callback APIs for 10 merchants in 6 months, and resolved 54 L3 incidents in one year. Experienced in Java, Spring Boot, REST APIs, event-driven systems, Kafka, RabbitMQ, and Redis.

TECHNICAL SKILLS

Languages: Java, SQL

Frameworks: Spring Boot, Spring Cloud, Spring Data JPA, Hibernate

Backend & Architecture: Microservices, REST APIs, API Gateway, Event-Driven Architecture, Resilience4j

Messaging & Data: Kafka, RabbitMQ, Redis, MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS, Jenkins, GitHub Actions, Linux

Tools: Maven, Gradle, Git, JMeter, Postman, Prometheus, Grafana, curl, tcpdump, Wireshark, OpenSSL

PROFESSIONAL EXPERIENCE

Comviva Technologies | Java Backend Developer | Aug 2022 – Present

Mobiquity Pay — digital wallet and payments platform | Bangalore, India

- **Bank integrations (3 banks / ~4 months):** Delivered wallet-to-bank and bank-to-wallet integrations for 3 major banks in approximately 4 months, owning REST APIs, transaction flows, and database changes across Mobile, Web, and USSD channels.
- **Merchant integrations (10 merchants / 6 months):** Implemented third-party e-commerce payment APIs and merchant callback integrations for approximately 10 merchants over 6 months, integrating EIG and notification components to provide reliable transaction-status updates.
- **Production reliability (54 L3 incidents / 1 year):** Resolved 54 L3 production incidents and client enhancement requests within one year, using log analysis, targeted SQL, and network-level diagnostics (curl, tcpdump, Wireshark, OpenSSL) to troubleshoot transaction and integration failures.
- **Cross-border remittance & ERS (1.27M+ transactions):** Built an international outgoing remittance service with multiple biller integrations and a real-time exchange-rate microservice. The service recorded **1,274,219 transactions since 8 October 2026**. Developed REST APIs to create, update, and retrieve ERS rates stored in the database, and enabled the ERS microservice for Web and App modules alongside the existing platform flow.
- **Deployment efficiency:** Contributed to modularizing monolithic backend logic into Spring Boot microservices and streamlining CI/CD, helping reduce average deployment time by approximately 30%.
- **Messaging reliability:** Supported RabbitMQ cluster and quorum-queue validation, including replication and partition-handling checks for asynchronous backend communication.
- **Performance testing:** Contributed to NFR testing of 8 Africell DFS payment API flows; an 8-hour endurance test sustained 4.99 TPS against a 5 TPS target across 143,740 API calls with zero errors.
- **Release delivery:** Collaborated with QA, DevOps, and Product teams to ship microservice releases and production fixes through CI/CD and Agile/Scrum.

PROJECTS

Distributed API Rate Limiter | github.com/srikant-ajith/distributed-rate-limiter

- **Algorithm & controls:** Implemented a configurable sliding-window rate limiter in Java/Spring Boot to enforce request limits per API key.
- **API integration:** Added a reusable request filter/result model, HTTP 429 throttling, and rate-limit headers including X-RateLimit-Limit, X-RateLimit-Remaining, X-RateLimit-Reset, and Retry-After.
- **Distributed extension (in progress):** Extending the implementation with Redis-backed shared state and atomic Redis/Lua operations for consistent enforcement across service instances. Prometheus/Grafana monitoring remains planned.

E-Commerce Order Management — Microservices System | github.com/srikant-ajith/ecommerce-microservices

- **Microservices & events:** Built Product, Order, Inventory, Payment, and Notification services with Spring Boot/Spring Cloud, REST APIs, centralized configuration, and API Gateway routing.

- **Resilience:** Implemented Kafka-based event-driven communication and Resilience4j circuit-breaker, retry, and fallback patterns.

EDUCATION

Bachelor of Engineering (B.E.) | Bangalore Institute of Technology | 2022

Class XII (CBSE) | 86% | June 2017
